

Your **Kinesis RTD Columbus Futura fork** has been fitted with precautionary shields to protect the carbon steerer in case of accidental rub with the internal gear and brake cables.

Please do not remove these shields. We strongly advise that you do not fit any other forks to the RTD frame. The Futura fork has been designed with a narrow taper to allow the cables to pass safely.

- As with any carbon fork and gear/brake cables, the user must visually inspect the cables and carbon fork steerer tube every 12months for any damage or sign of wear.
- If the outer housing or fork shields show any sign of wear you must replace the affected parts immediately
- If the carbon fork steerer tube shows any sign of wear or damage – do not use the fork and contact your local Kinesis dealer or Kinesis UK directly for further advice. info@kineisbikes.co.uk

Thank you for choosing Kinesis UK and we hope you'll enjoy many miles riding with your new '**RTD**'.
